

Peak Mobile Insights for Transportation & Logistics

Improving critical mobile communications with real-time mobile device analytics for Transportation & Logistics

Get real-time, actionable insight on the health and use of your FORGE scanning devices

PMI is a cloud-based software tool that optimizes scanner reliability with 24/7 access to real-time device data. With instant business intelligence for planning, proactive decision making and swift problem resolution, PMI helps you improve scanner operations. PMI provides a single portal view on data from multiple aspects of your scanner including applications, batteries, cellular, Wi-Fi, SIM cards, disruptions, reboots, operating systems, patches, hot fixes and much more.

In a recent survey of FedEx Ground ISP's, 97% of ISP's said that "enhancing visibility of our scanners" was their number one priority for helping to better manage their scanner pool each day.

We heard your request and have enhanced our FXG portal with the use of the PMI data engine to feature:

Scanner Asset Listing

- View all scanner serial #s in contract
- Manufacturer, model, last seen, status

Battery Health

- Scanner battery status (good/warning, replace)
- Average hourly discharge

Device Application Overview

- Application version, last updated date
- Application data usage
- Number of applications
- Size of applications, last used date

Scanner Locator

- See the physical location of your scanner
- Display "Last Updated" time and date stamp

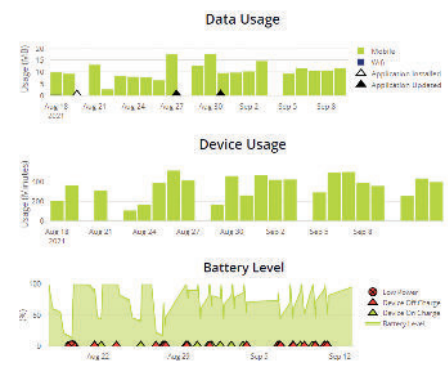

Scanner Performance

- Data usage
- Device charge level
- Event list including event type, event time, and event information
